Kinase-dependent and -independent functions of the p110 phosphoinositide-3-kinase in cell growth, metabolic regulation and oncogenic transformation

Thomas Edward 04-09-2009

1 Kinase-dependent and ³nilateral functions of the p110 phosphoinositide-3-kinase in cell growth, metabolic regulation and oncogenic transformation are distinct, and therefore – independent, and not experimental- related, in different medical, natural and biotic applications

Kinase-dependent and ³nilateral functions of the p110 phosphoinositide-3-kinase in cell growth, metabolic regulation and oncogenic transformation are distinct, and therefore – independent, and not experimental- related, in different medical, natural and biotic applications. We are basing this knowledge, and therefore correct the Technical Foundations in Cell Growth and Pf Pf Pf Pf Pf Pf Pf Pf Pf
